I really miss only few things. 1. Auto-reconnect a phone and a laptop. Need to push "Verify identity" button and confirm on the phone so far. 2. It'll be good to be able to see and send pictures via messengers on a Windows laptop, e.g. Viber, through the connected phone. 3. Keep a clipboard setting on disconnection. For now it needs to enable sharing when devices get reconnected. 1 person found this review helpfulDid you find this helpful? J M (Epicwaffle393)Successfully establishing a connection is more exception than rule, devices get paired to then immediately disconnect without any options to reconnect save for going through the (un)pairing procedure again. The once in a blue moon I can use the app it works pretty decent, file sharing is convenient and as expected. Streaming quality of the android screen is decent enough, interacting from desktop -> android is a nice feature although not very responsive. 3 people found this review helpfulDid you find this helpful? Jeremy PajotNot bad, I don't love the interface but it's a super easy way to get files from my computer to my phone in tablet. It also transfers rather quickly and doesn't require an internet connection which is nice. I just think the UI is weird, it looks like a chatbox. Definitely super useful though, essentially an air drop alternative if you're in the Samsung Microsoft ecosystem. 3 people found this review helpfulDid you find this helpful?
